### EXPERIENCE: WOMEN'S PERFORMANCE ROAD

Keeping up? Most riders don't just like to keep up, and you're no different. Riding for your means leaving your friends behind every once in a while, just to show 'em you've been training hard.

Like you, women everywhere asked for a bike that was as high octane as it was ergonomically friendly. We delivered with our new FACT carbon Ruby. Designed to help female riders go faster, longer, the Ruby relies on the same proprietary FACT composite technology and Zertz vibration eating dampers as our Tour de France tested Roubaix model. Every Ruby model also comes equipped with a full complement of women's-specific components including our legendary Body Geometry saddles, women's-specific handlebars, adjustable stems and shorter cranks that facilitate a faster spin.
